To His Honour THOMAS WILSON PATERSON,
Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR :

The undersigned respectfully submits herewith the Annual Report of the Medical Superintendent of the Mental Hospitals for the year 1913.

HENRY ESSON YOUNG,
Provincial Secretary.

*Provincial Secretary's Office,
January, 1914.*

OFFICERS AT NEW WESTMINSTER.

Medical Superintendent · *Assistant Medical Superintendent :*
C. E. DOHERTY, M.D., C.M. J. G. McKAY, M.D., C.M.

Third Physician :
H. S. STEEVES, M.D.

Bursar : *Assistant Bursar :*
T. H. CAMBRIDGE. M. H. McCABE.

Correspondence Clerk : *Clinical Clerk.*
C. H. GOODING. W. E. HUNT.

Matron :
MARIA FILLMORE.

Steward and Storekeeper. *Engineer :*
R. REES. W. F. JOHNSTONE.

Chaplains :
R. LENNIE, C. of E.
H. P. BESSETTE, O.M.I., R.C.

Chief Male Attendant : *Matron and Chief Female Attendant ·*
GILBERT MATHEWSON. MARIA FILLMORE.

Carpenter :
THOMAS CORMACK.

Plasterer and Mason : *Farmer :*
EDWARD FITZGERALD. H. BAILEY.

Gardener : *Painter :*
R. BOOTH. D. SCLATER.

Tailor :
W. F. BEGGS.

Laundryman : *Shoemaker :*
E. B. JONES. T. M. YEADON.

OFFICERS AT ESSONDALE.

Medical Superintendent :

C. E. DOHERTY, M.D., C.M.

Assistant Medical Superintendent :

D. D. FREEZE, M.D., C.M.

Bursar :

GOWAN S. MACGOWAN.

Assistant Bursar :

GRANBY FARRANT.

Clinical Clerk :

H. W. STRONG.

Steward and Storekeeper :

J. B. PUMPHREY.

Engineer :

ROBT. GRAHAM.

Chaplains :

H. FANE-EDGE, Church of England.

F. KIENTZ, Roman Catholic.

Chief Male Attendant :

HARRY A. HOULT.

Electrician :

THOMAS MOWBRAY.

Cook :

F. B. FOSTER.

Painter and Decorator :

A. A. KILLEN.

Nurseryman :

E. B. STINCHCOMBE.

Plumber :

A. G. PARROTT.

REPORT OF MEDICAL SUPERINTENDENT

FOR THE YEAR ENDING DECEMBER 31ST, 1913.

MENTAL HOSPITAL,
NEW WESTMINSTER, B.C.
December 31st, 1913.

*The Honourable the Provincial Secretary,
Victoria, B.C.*

SIR,—I have the honour to submit herewith the Forty-second Annual Report of the British Columbia Mental Hospital for the year ending December 31st, 1913. Accompanying this report will be found a concise statement, in tabular form, from the heads of various departments and from the books of the Hospital, showing the exact movements of the Hospital population during the year, together with an accounting of all moneys received and expended during that period.

Owing to the fact that the Mental Hospital at Essondale was opened for the reception of patients on April 1st, 1913, and still remains as a branch of this Hospital, it becomes necessary for me, in many instances, to duplicate tables in order that you may more readily compare one institution with the other in all departments.

I am pleased to be able to state that the affairs of the Hospitals and Colony Farm have, on the whole, progressed harmoniously and successfully during the year, and I believe that each of these institutions has fulfilled its mission, both as to the treatment and care of patients. The medical staff has done excellent work without exception; the two new medical officers, Drs. D. D. Freeze and H. C. Steeves, proving very valuable acquisitions to the staff. Our Matron and Supervisors and all nurses have done excellent work, and to this one feature, probably more than to any other, any measure of success we may have obtained is due. Nursing is undoubtedly the most important feature in the treatment of the insane; in fact, there are many experienced men who will say that if the choice lay between a good physician with a poor nurse, and a poor physician with a good nurse, they would choose the latter. Without going so far, it may readily be granted that the success of any hospital for the insane is in a very great measure dependent upon the efficiency of its nursing staff. Perhaps the physicians of some years ago realized this even better than we do now, but were unable for certain reasons to cope with obstacles which may have been placed in their way. We, now, with our well-organized nursing staff, feel confident that our directions will be intelligently carried out, and that the comfort of the patient will be the constant care of the nurse. To us, now, I am pleased to be able to say, as a result of the free hand you, as Provincial Secretary, have always given us, the ignorant, shiftless, lazy, eye-serving, and sometimes drunken attendant of former days is unknown in this Hospital, and we are even inclined to forget how much harm such a person can do. It was the constant complaint of our immediate predecessors that their best-directed efforts were being effectually thwarted by incompetent nursing. When the primary purpose of the nurse is other than to carry out the directions of the physician in charge, and to see that the treatment is as he intended, it is high time to discharge such nurse, and if he, as Superintendent, does not possess such absolute power, it is time that he himself passed in his resignation in the interests of the patients of the Hospital.

In order to facilitate a more ready comprehension of the data given in the tabulated portion of the report, the following résumé and summary is presented: At the close of the year the number of patients under our care was 919, of whom 683 were men and 236 were women. The admissions for the year were 380; of these, 276 were men and 104 were women, an increase of admissions over the previous year of 5. Of the admissions, 235 were suffering from a first attack, 46 were suffering from a second attack, and 6 from a third attack. In 93 cases it was impossible to ascertain the number of attacks, but it is more than probable that a portion of these cases were recurring.

Of those admitted, 161 were married, 9 were in the widowed state, 2 were divorced, 199 had never been married, while in 9 cases it was impossible to ascertain the civil state.

In religion, 232 were Protestants of various denominations, 58 were Roman Catholics, 14 were heathen, and 76 cases the religion could not be ascertained.

The total number discharged for the year was 236. Of these, 86 were discharged recovered, 92 were discharged as improved, and 54 were discharged as unimproved; 4 were discharged as not insane. The percentage of recoveries computed on the number admitted during the year is 22.63 per cent.

CAUSES.

During the past year we have made every attempt to ascertain, as far as possible, the exact cause of mental breakdown in each case admitted to the Hospital, and statistics as contained in Table No. 14 will give you some idea as to this. In this connection we have again experienced considerable difficulty, as some of the data obtained from friends and relatives of patients could not be relied upon.

You will notice that heredity has again played a very important part, probably a much more prominent part than the table really indicates. In studying this table, it must be borne in mind that hereditary tendency need not be of actual insanity, but may be that of other neuroses, and that a heredity of epilepsy, hysteria, nervousness, or even alcoholism, may, among some others, lead to insanity in a descendant. The converse may also be the case; all of which goes to show the extreme difficulty in definitely assigning exact cause or causes in such a large number of cases as admitted during the past year.

Alcohol.—Excessive indulgence in alcohol is reported as having been the exciting cause in 11 per cent. of the total number of admissions. There can be no question that alcohol is a potent exciting cause in a large percentage of cases, particularly where any predisposition lurks, and there can be no question that the matter of properly handling the liquor traffic is to-day one of the greatest problems confronting Canadian people. In this Province a short time ago, probably the most practical and effectual law ever enacted went into effect.

The Pharisee who uses the "holier than thou" principle as an explanation of his own sobriety is by no means a stimulant to reform. Preaching and moral influences in general have done much individual good, but King Alcohol still sits firmly on his throne, with society behind him, and, with an "incompetent" born every other minute, he should never lack for subjects. In my opinion, the only practical legal regulations would be such as prescribe and enforce a purity standard; these, coupled with the proper physical training and education of the masses, should eventually reduce the traffic.

Other Causes, such as venereal disease, childbirth, business worry, trauma, etc., have also furnished their quota. In going over the histories of our admissions, we find that quite 18 per cent. have suffered from previous attacks, in many instances as many as two or three. There could be no stronger proof than this of the nervous instability and constitutional weakness of those who become insane, and of the important part that inheritance really plays in the causation of insanity.

Patients Day room New Mental Hospital, Essonville (West Wm4)

TREATMENT.

The mental and physical treatment of the patients, as in previous years, has been faithfully carried out, and has included not only internal medication and rest, but such other auxiliary measures as have been indicated in each individual case. The mental manifestations as well as the physical condition of each patient have been noted. The work pursued in the pathological laboratory was, of course, interrupted by the sad death, during the year, of our pathologist, Mr. Hughes; but when a suitable successor can be obtained, it is our intention to pursue this branch of the work even more energetically than heretofore.

As in the past, it has been our endeavour to provide occupation for each patient as soon as the individual's condition would warrant it. After a few years' experience at Colony Farm, we are more than ever convinced of the value of occupation as a remedial agent in the treatment of mental diseases. That suitable employment is the best remedy for many ills of mind and body has long been recognized. Of late years, however, its value has begun to be more generally appreciated; also the important fact that its benefits can be extended to a much larger number than was formerly believed. Among no class of patients are the beneficial effects of employment more marked than among the insane in our hospitals, and it cannot be otherwise than interesting and instructive to consider what results have been obtained and what conclusions drawn in consequence of the employment as a remedial agent in this Hospital.

We have found that at least two-thirds of our male patients are capable of some employment, and need it as much as sane people, or more; and it has always been a surprise to me to note in some institutions where the greatest expense has been made to introduce new amusements, and everything which can make the time pass agreeably and profitably, a large portion of it spent by most of the inmates in sheer apathy and idleness.

In acute cases, after the excitement has passed away, I believe that employment of some sort is more important than it is in any other situation in which a man can be placed. The great object of treatment in such cases must obviously be to direct the attention from self, from the subjects of delusion, and fix it, without exercising it too severely, on some other interesting object. This can in no way be so effectually done as by interesting the patient in some occupation.

In melancholy cases, what is more likely to be beneficial in calling the mind away from gloomy meditations? And in all, how necessary is employment to induce sleep, which is so frequently disturbed in insanity, and to promote the health of all the animal functions which are so important to health of mind?

We try to promote industry as far as possible by classification. Our reception wards are in two divisions, the acute division and the industrial division. As soon as the more acute symptoms have, in a measure, subsided, the patient is taken to the industrial division, where he finds an atmosphere of industry, nearly all doing something—some, of course, more than others—and he naturally goes with the current. Observations on these reception wards during the past two years show that about 70 per cent. of those admitted begin to take up some occupation within three weeks. As the patient's symptoms improve he is sent to Colony Farm, where greater freedom prevails; and from here home when sufficiently restored. By adopting such methods we have found that only a very small residuum is relegated to that eyesore, the refractory ward.

Of all work to which we have placed patients, the very best for the men we have found to be work on the farm in the open air amid healthy surroundings. We have found that it soon renders them more composed and patient and better satisfied with themselves, and so promotes a speedy convalescence. On the other hand, we were never surer than now of the profitableness of our large farming operations from every point of view. The tabular statement of farm

products which we submit shows an enormous total farm yield, almost all of which is consumed in the institution. The steady extension of the tillable area is a marked feature of the operations from year to year, while the demonstration which the farm is giving to all our Canadian institutions of the utility and beneficence of field labour for such patients should also be considered a most valuable product. In this connection I would like to repeat verbatim an article which appeared in the *Chicago Inter Ocean*, under date of December 7th, 1913:—

“When the judges pinned the blue ribbon on ‘Nerissa’ at the International Live-stock Show, they not only put the official seal of approval on the handsome mare, but they recorded a victory for the new method of treating insanity which is being worked out in the Province of British Columbia.

“‘Nerissa’ and her companions, ‘Peggy’s Pride,’ ‘Colony Lady Begg,’ and other Clydesdales which have scored so signal a victory over horses from Illinois, New Jersey, Pennsylvania, and other States famous for their stables, are the product of the care and labour of insane patients at the Mental Hospital at Coquitlam, where agriculture and stock-breeding have proved a self-sustaining means for curing insanity, and which last year netted the Province \$40,000 instead of being a heavy expense to the taxpayers, as such hospitals usually are. The result of this Hospital’s revolutionary methods may mean world-wide changes in the administration of State institutions for the care of those who are in the twilight state of mental derangement.

“The success at Coquitlam, signalized by marked improvement in the cases under treatment and by a museum of blue ribbons, prizes, and medals won by live-stock bred and raised there, is credited largely to Dr. C. E. Doherty, who has built the Hospital in a thousand-acre clearing, cut in the primeval forest; to Dr. Henry Esson Young, Minister of Education and Provincial Secretary of British Columbia; and to the free hand given by the Province.

“British Columbia has long been noted for its high-bred live-stock. Many stockmen have taken advantage of the natural suitability of the country for stock-breeding to establish the industry; and recognizing this suitability, Dr. Doherty, in making plans for his \$2,000,000 institution, decided to supplement it with a farm specializing in fine live-stock, not only furnishing wholesome employment for the patients, but a self-sustaining income to the Hospital.

“Splendid Crops raised.”

“The Colony Farm is operated in direct connection with the Hospital, and worked almost altogether by the patients. The farm cottages house a large number of patients, 193 being quartered there in 1912, under a minimum of supervision and attendance. The patients work in the fields; in 1911 they raised 250 tons of hay, 130 tons of potatoes, 125 tons of oats, and over 100 tons of mixed roots, to say nothing of green feed obtained for dairy cattle and young horses. When they began exhibiting, they furnished the surprise of the year to live-stock men, winning thirteen championships out of a possible fourteen at the Ottawa Fair, and at Toronto capturing the much-coveted gold medal for male animals. Incidentally, the farm furnished the Hospital with milk, a large proportion of its butter, vegetables, fruit, and flowers.

Dr. Holmes approves Plan.

“Dr. Bayard Holmes, the Chicago alienist and author of numerous monographs on insanity, the best known of which is ‘Friends of the Insane,’ said yesterday; ‘I have conferred with Dr. Doherty on his visit to this city, and consider that the ideas advocated by him and carried out in the Coquitlam Mental Hospital are undoubtedly correct, and far in advance of the time-dishonoured methods of caring for the insane. His use of the congregate dormitories, fresh-air treatment of chronic cases, and division of the patients into social groups are all admirable. Of the Colony Farm work I cannot speak too favourably. The out-of-door labour and work with animals, as well as the housing of patients in temporary quarters, are all excellent, and when combined with careful medical treatment should produce noteworthy results.’

“Young stock also is sold to outside purchasers, and British Columbia farmers, who are expert judges of cattle and horseflesh, are eager to pay good prices for pedigreed animals from Colony Farm. Southern British Columbia, with its mild climate, abundant feed, and pure water and sheltered valleys, is rapidly becoming a distinctively stock-breeding region; and the

notable victory that the Colony Farm has won at the live-stock show here this week has brought the attention of the United States stockmen sharply to the fact that the Pacific Province is a force to be reckoned with in live-stock competitions."

HYDROTHERAPY.

The splendid effects to be derived from the appropriate use of this method of treatment have been quite evident during the year, and, in my opinion, no other means of treatment can compare with hydrotherapy in reducing motor restlessness and exerting beneficial and soothing reflex influence in states of agitation, anxiety, and depression.

Mr. Saunders has handled this department to our entire satisfaction ; the attached table showing exactly the amount of work done in our bath-rooms. During my trip East late last summer, I had occasion to visit the hydrotherapeutic departments of several hospitals, and in none of them did I see the acutely insane handled with better system and success than is being done by our Mr. Saunders. During the past year the following work was done in the different hydrotherapeutic departments :—

- 3,611 warm full baths.
- 5,145 rain and needle showers.
- 792 steam cabinet-baths, followed by massage.
- 92 prolonged and continuous baths in maniacal cases.
- 45 patients have been treated electro-therapeutically.
- 28 syphilitic patients have received innunctions.

AMUSEMENTS.

A form of treatment for our patients which cannot be overlooked is found in affording them means of amusement. We have availed ourselves of such resources as were at our command in entertaining and amusing our patients, so as to divert them from their vagaries and awaken in them an appreciation of the normal and healthful side of life. The usual weekly dances or concerts have been given throughout the year ; the patients who take part in these dances look forward to them, and speak of them as a weekly treat which they very much appreciate. Many who do not dance find pleasure and diversion watching those who do, and in listening to the music furnished by the Hospital orchestra. During the early summer we opened our new campus in the rear of the Hospital, and I feel safe in saying that no more beautiful or better-arranged sport-grounds exist in the Province. We were delighted to find that such a large number of patients showed a distinct inclination to participate in the different games which have been in progress on every fine afternoon of the summer months.

MENTAL HOSPITAL, ESSONDALE.

The new Hospital at Essondale was opened on April 1st, and at present contains 453 male patients. The Hospital building which is considered to be one of the finest on the continent, has proven itself in every way perfectly adapted for proper treatment and economical handling of the less-acute cases. The congregate dormitory system has worked most admirably, patients behaving much better under constant supervision. In this new Hospital almost every old asylum feature has been abolished. The large dormitories are all artificially ventilated, so that no windows are open ; patients have access to the toilets and fresh water throughout the night, no bed-chambers are permitted, and the result of such an arrangement is not only an improvement in the general atmosphere of the place and the night discipline of such patients, but also a reduction to a minimum of the many dangers which we only too well know existed in the single room or smaller dormitory periodically visited.

The new Hospital since its opening has been visited by many hospital-men from all parts, all of whom have been unanimous in their expressions of praise for the many new hospital

features embodied there. I have to thank Dr. Freeze and Mr. MacGowan and the other officers at Essondale for the very great assistance afforded me by them in completing the organization of this new Hospital, where everything is now running as systematically as if the Hospital had been in operation for years.

COLONY FARM.

Work at Colony Farm has gone along nicely during the year; the crops were abundant, while the milk and butter production was ample to supply both Hospitals. Much new land was brought under cultivation, and considerable grading done on grounds surrounding the new Hospital building; in all, over 23,400 days' labor was performed by patients under the supervision of attendants.

As a question has arisen in certain quarters as to why such extensive farm operations are necessary in connection with a hospital, and the assertion made that Colony Farm is gradually assuming the air of an agricultural experimental station rather than that of an asylum farm, I again wish to call your attention to the tremendous benefits of such operations to insane patients, and in this connection to repeat what Dr. Tanzie, the ablest authority on mental diseases of the day, has to say in his latest standard work on insanity and its treatment. Dr. Tanzie, on page 788, proceeds thus:—

"Agricultural Colonies.—Work, and especially work in the open air and in open and healthy surroundings, is of the utmost value for mental patients. It renders them more composed and patient, and better satisfied with themselves. Being a factor in the production of health and happiness, it also becomes a means of cure. In those asylums in which work for patients is carefully organized the mortality rate is decreased, mechanical restraint is reduced to a minimum, and recoveries are more frequent; the spirits of the patients are brightened, the labour of those who attend them is ameliorated, and the mission of the State, provinces, and communes, which thus provide not only for the custody but also for the recovery of their patients is ennobled. Hence every good asylum possesses an agricultural colony, and some city asylums which at one time did not possess one have been transferred to the country in order that they may do so.

"A nucleus of chronic quiet patients, accustomed to useful and regular occupation, and enjoying a certain degree of liberty, in addition to carrying on outdoor work, constitutes an excellent and salutary source of companionship for convalescent patients. While the male workers live together in a large home, with open doors and no single rooms, the female may be housed in a similar dwelling of homely character, where they can employ themselves in suitable work. Each house requires a very small staff of attendants, who share in the work of patients. It also serves as a place of probation, and perhaps also of discharge, for those patients who, whether workers or not, have not yet entirely recovered their tranquility. In these agricultural colonies the policy of the open door may be freely and unreservedly adopted. If under such a regime there does occur an occasional escape that might not otherwise have taken place, it does not constitute a danger or a fault, but will serve to impress upon the patients and the public the liberal spirit of the institution.

"The colony of workers, both male and female patients, imparts a tone of simplicity, peacefulness, and economy, which does not exist only in appearance, to the whole of the asylum. When the acute cases are concentrated in an observation hospital, it is those outdoor workers in the colony who come to form the most numerous and characteristic group in the asylum properly so called. In addition to the houses occupied by the workers, there should also be two infirmaries (one for each sex), with suitable accommodation for chronic patients, who may suffer from intercurrent diseases, especially those of febrile character, or who may require to be kept in bed, or are allowed up only for a few hours each day. Another pavilion is necessary for restless patients of each sex, with a few single rooms. It is not necessary for all epileptics to be placed together in a special department. They differ too much from one another in their lucidity, in the frequency of their fits, and their liability to excitement, for those least affected to be condemned to a perpetual and not always happy association with their fellow-sufferers."

The methods adopted and the system of farming in vogue is practical in every way. Our Farm Superintendent, Mr. Montgomery, has done excellent work, as have also Mr. Holmes in charge of the dairy herd, and Mr. Stewart in charge of the Clydesdale stud. To demonstrate to you the opinion gained by the editor of Western Canada's greatest agricultural journal, who visited the farm recently, and who upon his return to Winnipeg wrote an editorial entitled "A Visit to Colony Farm," I here include his article verbatim:—

"Few of Canada's institutions, public or private, have so prominently come under public notice as that of Colony Farm, a Provincial Government institution which is located at Mount Coquitlam, British Columbia. This farm, its origin and its purpose, is well known to many of our readers; to others it is not. Its inception is directly due to the energy of the Superintendent of the Provincial Asylum at New Westminster. Coming from Eastern Canada, Dr. Doherty saw in the Coast Province the need for better stock and more up-to-date farming methods. He foresaw the high prices of commodities that would have to be bought for inmates of the asylum, and he saw, too, the need for more outdoor employment for those that were mentally disabled. The solution of all these problems rested in the establishing of a farm to be managed in conjunction with the Hospital.

"And a farm it is. Visitors are unanimous in their opinion that for the size of the farm its equipment is unquestionably the finest in Canada, and probably it has no peer on the continent. The specialties of the farm are Holstein cattle, Clydesdale and hackney horses, but a really up-to-date system of farming is practised. Under capable foremen the asylum patients are brought into service, which lessens the cost of labour necessary in carrying on this class of farming. The farm foreman is Duncan Montgomery, who knows every detail in connection with the farm and its work. The Holstein herd is supervised by C. W. Holmes, and Malcolm Stewart has charge of both Clydesdales and hackneys.

"Of the 1,700 acres comprising the farm, some 600 acres are rich, heavy, level land in the Fraser Valley at the junction of the Coquitlam and Fraser Rivers.

"This land is exceedingly fertile and heavy crops are the rule. Wheat is not grown, but oats frequently yield as high as 100 to 115 bushels per acre. Timothy, clover, and red-top have given wonderful results, the record being 5 tons per acre in one season. Dr. Doherty has made 'thoroughness' the slogan at Colony Farm, and every department of the institution shows it. In addition to hauling the manure away from the barns to the field each day, a large water-tank with sprinkler attachment distributes the liquid manure over the fields. This has proven a very satisfactory method of utilizing the liquid portion of the manure.

"*The Holstein Herd.*—The best advertisement the Colony Farm has is their 30 lb. Holstein cows. Such a handsome string of show animals and milk-producers can scarcely be duplicated. The Holstein was chosen as the breed that best suited conditions at this farm, and the best the breed can produce is found there. The herd was started in 1910, and at that time numbered twenty-two head. So rapidly has this department developed that to-day there are 119 head to gladden the eye of the visitor. While the herd has carried off highest honours from coast to coast in Canada, their glory does not end in the show-ring. All energy is being directed towards the production of records, and in this connection the effort has been admirably repaid.

"In all, over twenty head are recorded in the R.O.M. test, and every cow is making Holstein history that it is a great credit to British Columbia and to all Canada. The beautiful string of young black-and-whites are as fine as can be found anywhere.

"*The Clydesdales.*—Colony Farm has procured the best in Clydesdales that Scotland could provide. At the head of the stud is 'Bowhill Baron,' by 'Baron's Pride,' who was champion at the Dominion Exhibition, Regina, in 1911. He is all that is to be desired in Clydesdale perfection, unless it were rather more scale. The real prizes of the horse department are the Clydesdale mares. To mention the famous mares 'Nerissa,' 'Peggy Pride,' 'Opal,' 'Colony Lady Begg,' and 'Boquhan Queen' is sufficient to indicate that Canada has no better. At the recent Chicago Show, in competition which has never before been seen at the International, Colony Farm was the most noted winner in the yeld mare class, and looked well there. 'Peggy Pride,' by 'Baron's Pride,' got no more than her due at second place to 'Harviestoun Baronness,' the champion mare of the show, in as strong a brood-mare class as the International has ever seen. 'Colony Lady Begg,' by 'Royal Favourite,' stood first in the three-year-old mare class, and a yearling by 'Baron's Pride,' as fourth in a very strong class. The six-horse

team of Clydesdale geldings was the admiration of all who saw them at Chicago. Much more might be said of the animals on this farm, but space prevents. The purchase of such high-class stock to found a stud indicates the most brilliant future for Colony Farm Clydesdales.

"*The Farm Buildings.*—The extended illustration shown above gives a splendid idea of the location, grandeur, and style of the farm buildings. On the extreme left is the water-tank, and boarding-house attached. The large brick building is the cottage for the inmates of the asylum that are put to work on the farm. Next comes the large horse-barn, which is built with box stalls around the three walls, and with a large arena for exercising horses in the centre. In the upper portion at the left end, the most comfortable kind of rooms are laid out as sleeping-rooms for the regular farm-hands.

"The building in the centre which shows an end view is the hay-barn. The two concrete silos are filled with ensilage, and their location is the most convenient for feeding in the two cattle-barns to the right of them. The farther barn is the dairy-barn. It is a perfect model of cleanliness and order. Equipped with concrete floor, iron stanchions, water-basins, and every conceivable convenience for good work, they have been pronounced ideal in their construction. An interior view of the farther barn is shown herewith. The nearer building is the cattle-breeding barn. Both single stalls and box stalls are used here. The young stock is kept in the barns during the day and turned out at nights during the warm weather. Their glossy coats tell full well the painstaking care of their herdsman, together with nutritious grass and alfalfa grown in British Columbia."

EXPENDITURE.

The question of our *per capita* cost for maintenance is, of course, one of very great importance, and I fully appreciate the criticisms which may be made on such a necessary outlay. I think it is only right that I should call attention to various conditions which may have contributed to this slightly increased *per capita*.

In the first place, during the past year we have opened the new Hospital at Essondale, and much unlooked-for expenditure had to be made, which, of necessity, was charged to maintenance. This proved a considerable burden, but next year we should again drop to our usual rate. In the second place, the prices of all commodities have risen, in some instances as much as 30 per cent. over the previous year.

Notwithstanding the above, we believe that a careful scrutiny of our expenses will convince any one that, keeping in view the highest welfare of our patients, we have avoided alike reckless extravagance and the extreme cheapness which too frequently approaches meanness. When you consider that we have treated medically, nursed, fed, and clothed our patients, as well as supplied heat and light for them, at a *per capita* cost per diem to the Province of $47\frac{3}{10}$ cents, I think you will agree with me that no wilful extravagance was incurred.

In connection with *per capita* cost, I would here like to emphasize what I have repeatedly stated to the Provincial Auditing Department—namely, the propriety of crediting on our computation, funds received from patients, as well as from such sources as farm, stock, dairy, etc., thus allowing us to give the actual figures as to the cost to the Province for the maintenance of its insane. If the above named revenues, which were actual earnings of the institution, were allowed, our *per capita* cost would certainly appear much lower. Our Bursar assures me that the reduction would be about 25 per cent., or, in other words, the actual cost to the Province of its insane has been much less than 50 cents per patient per day.

DEATHS OF STAFF MEMBERS.

I feel the greatest sorrow at having to report to you the deaths, during the year, of two members of our staff; that of our pathologist, F. P. Hughes, who died of tuberculosis on June 23rd, and of Thos. Dalrymple, one of our older attendants, who died of appendicitis on December 3rd. Both were men of strong mind, good sense, stout heart, and generous in all things. And I beg merely that I be permitted to spread upon the reports of this Hospital some slight record to hallow the memory of two good men whose deaths were deplored by every single employee of the two Hospitals.

One of the amusement rooms, New Mental Hospital, Essondale

ACKNOWLEDGMENTS.

The Hospitals are under obligation to their friends for newspapers, periodicals, journals, and reading-matter of a great variety, and though it is probable that this matter, through this report, will come to the notice of but very few of these good people, still I will indulge and express the hope that contributions of this character may continue to grow, for they are a great source of pleasure and profit to the patients.

In conclusion, I desire to renew the expression of my grateful appreciation to the physicians, officers, nurses, and employees, who have faithfully performed their respective duties and given me their cordial support, for whatever success has been attained was only possible as a result of their combined efforts and most efficient service. To you, sir, and to the other Hon. Members of the Cabinet, for the great confidence you have always reposed in me, I shall ever feel grateful, and with a profound sense of my great responsibility will ever endeavour to discharge my duties faithfully. At the same time, I wish also to assure you, as Provincial Secretary and medical man, of my deepest sense of gratitude for your very great assistance and approval of our every effort to relieve or palliate the condition and affliction of those mentally sick people whose destiny fate has decreed should come under the benevolent care of your Department.

I have the honour to be,

Sir,

Your obedient servant,

C. E. DOHERTY,

Medical Superintendent.

THE PROVINCIAL COLONY FARM
(INCLUDING SUNBURY BRANCH).

C. E. Doherty, Esq., M.D.,
Superintendent, Mental Hospital,
New Westminster, B.C.

SIR,—I herewith beg to submit a report to you of the various operations in connection with Colony Farm, for a period of eight months, since installing our new system. Also a statement showing the total cost of produce raised for the year ending December 31st, 1913, together with various tables.

All of which is respectfully submitted.

G. S. MACGOWAN,
Bursar.

The operations show a net profit (exclusive of patient-labour) amounting to \$3,437.14 after deducting the cost of maintenance.

(See Schedule A for details.)

You will observe that the data shown below is classified into departments, viz.: Branch, Hay, Oats, Pasture, Roots, Horses, Cattle, Maintenance.

The departments were created last May, when, owing to the magnitude of the operations at the farm, it was considered necessary to install a proper system of costs which would control the expenditures and revenue connected with each department. This system has been followed up from month to month during the balance of the year, and the information gathered has afforded us a great deal of service in conducting the affairs of the farm.

All the above-mentioned departments are revenue-bearing, with the exception of maintenance and horses; the greater part of the operative cost in the Maintenance Department represents the expenses incurred in connection with show and exhibition purposes, together with the outlay in keeping the general condition of the farm up to a high standard of efficiency and appearance. In this connection, a portion of this work comprises the care of buildings and equipment, pavements, ditches, drains, and fences, and the loss necessarily sustained is quite properly offset by the economic benefit produced. Therefore, in reviewing the following results of the season's work, it should be borne in mind that, although the cost of this department has been charged off against the profits, the economic features of this department should be overlooked.

The following figures represent the acreage under cultivation for the season's crops, viz. :—

	Acres.
Hay	93 $\frac{3}{4}$
Oats	76 $\frac{1}{4}$
Pasture	46
Potatoes	15
Corn	10
Mangels	5
Carrots	4
Garden-stuff	5
Turnips	2
Total	259

SCHEDULE A.

The expenditure and revenue for the various departments, together with the profit or loss on each, is listed below, viz. :—

Department.	Acreage.	TOTAL FOR EIGHT MONTHS.			
		Expenditure.	Revenue.	Loss.	Profit.
Sunbury Branch		\$ 9,845 66	\$17,152 09		\$7,296 43
Hay	95 $\frac{3}{4}$	786 17	3,882 00		3,095 83
Oats	76 $\frac{1}{4}$	2,055 81	2,302 65		246 84
Pasture	46	15 05	898 07		883 02
Potatoes.....	15	867 23	1,906 87		1,039 64
Corn	10	249 26	520 00		270 74
Mangels.....	5	170 84	607 02		436 18
Carrots.....	4	254 59	1,209 45		974 86
Garden-stuff.....	5	154 15	357 56		293 41
Turnips.....	2	80 48	273 48		193 00
Horses.....		6,905 54	5,385 30	\$ 1,520 24	
Cattle and Dairy.....		15,065 94	15,745 52		679 58
Maintenance.....		10,362 15		10,362 15	
Totals.....		\$46,802 87	\$50,240 01	\$11,882 39	\$15,319 53

The net profits, therefore, amount to \$3,437.14, viz. :—

Total profits (shown above)	\$15,319 53
Less losses (shown above).....	11,882 39
Net profits.	\$ 3,437 14

SCHEDULE B.

The cost and revenue, together with the corresponding net profit per acre, is listed below, viz. :—

Department.	Cost.	PER ACRE.		Profit.
		Revenue.	Loss.	
Hay	\$ 8 21	\$ 40 54		\$ 32 33
Oats	26 96	30 20		3 24
Pasture	33	19 52		19 19
Potatoes.....	57 82	127 13		69 31
Corn	24 93	52 00		27 07
Mangels.....	34 16	121 40		87 24
Carrots.....	58 65	302 36		243 71
Garden-stuff.....	30 83	71 51		40 68
Turnips.....	40 24	136 74		96 50
Totals	\$282 13	\$901 40		\$619 27

Operating-room, New Mental Hospital, Escondido.

SCHEDULE C.

The yield of the various crops (not including Branch) is shown below in quantities, viz. :—

	lb.
Hay	490,000
Oats	144,212
Potatoes	254,250
Corn (silo)	160,000
Mangels	101,170
Carrots	161,260
Turnips	45,580
Garden-stuff	sundry quantities in miscellaneous products.

SCHEDULE D.

The yield of the various crops at the Sunbury Branch is shown below in quantities, viz. :—

	lb.
Hay	800,000
Oats	420,600
Barley	42,826
Wheat	51,610
Straw	4,135
Potatoes	48,000
Mangels	100,000
Carrots	36,000
Beets	3,000

THE DAIRY DEPARTMENT.

The yield of milk amounted to \$13,480.92 ; the quantity being 398,450 lb., or an average of 49,806 lb. per month.

The yield of cream was 17,828 lb. and skim-milk 49,806 lb. from the separation of 135,361 lb. of milk.

The yield of butter was 2,405 lb. and buttermilk 7,160 lb. from churning 9,443 lb. of cream.

The increase of live-stock amounted to, through births of calves, \$1,300 ; The number born being twenty, or an average of over two calves per month.

The breeding services amounted to \$25.

THE HORSE DEPARTMENT.

The net loss in this department amounted to \$1,520.24 for the period under review.

The expenditure is treated through the following accounts: Feed ; bedding ; salary ; employees' keep ; sundry expenses.

Its source of revenue is derived through the following accounts: Labour ; breeding services ; increase in live-stock ; profit on sale of live-stock.

The Labour Account for the season amounted to \$4,509.27.

The breeding services amounted to \$380, and the increase through births amounted to \$400.

STATISTICAL TABLES.
